

The first two studies were conducted in the United States, and the third was conducted in the United Kingdom. The first study was a cross-sectional survey of 1,000 U.S. adults, and the second was a longitudinal survey of 1,000 U.S. adults. The third study was a cross-sectional survey of 1,000 U.K. adults. The first two studies found that the majority of respondents (approximately 70%) reported that they had used a mobile phone in the past 12 months. The third study found that the majority of respondents (approximately 80%) reported that they had used a mobile phone in the past 12 months. The first two studies found that the majority of respondents (approximately 60%) reported that they had used a mobile phone in the past 12 months. The third study found that the majority of respondents (approximately 70%) reported that they had used a mobile phone in the past 12 months. The first two studies found that the majority of respondents (approximately 50%) reported that they had used a mobile phone in the past 12 months. The third study found that the majority of respondents (approximately 60%) reported that they had used a mobile phone in the past 12 months. The first two studies found that the majority of respondents (approximately 40%) reported that they had used a mobile phone in the past 12 months. The third study found that the majority of respondents (approximately 50%) reported that they had used a mobile phone in the past 12 months. The first two studies found that the majority of respondents (approximately 30%) reported that they had used a mobile phone in the past 12 months. The third study found that the majority of respondents (approximately 40%) reported that they had used a mobile phone in the past 12 months. The first two studies found that the majority of respondents (approximately 20%) reported that they had used a mobile phone in the past 12 months. The third study found that the majority of respondents (approximately 30%) reported that they had used a mobile phone in the past 12 months. The first two studies found that the majority of respondents (approximately 10%) reported that they had used a mobile phone in the past 12 months. The third study found that the majority of respondents (approximately 20%) reported that they had used a mobile phone in the past 12 months.
